

Temperature Sensor NTC M6-HS

- ▶ Application: -55 to 300°C
- ▶ Accuracy at 25°C: $\pm 0.3^\circ\text{C}$
- ▶ Accuracy at 100°C: $\pm 1.3^\circ\text{C}$
- ▶ Male thread: M6 x 1
- ▶ Nominal resistance: 10 kOhm $\pm 1\%$ (at 25°C)

This sensor is designed to measure temperatures up to 300°C of oil, water, fuel or air. This signal is used as a control value for engine control units or as a measurement value which is logged in a data acquisition system.

The NTC-sensing element has a negative temperature coefficient. This means, that with increasing temperature the conductivity rises and the resistance decreases. To improve a good protection against the ambient temperature, the housing is made of stainless steel and partly filled with an isolation-paste. The main benefit of the sensor is a very compact design and its very short response time.

Installation Notes

The NTC M6-HS can be connected directly to most control units using a pull-up resistor (typically 1 or 3 kOhm).

Any mounting orientation is possible.

Please find further application hints in the offer drawing and free download of the sensor configuration file (*.sdf) for the Bosch Data Logging at our homepage.
